Collaborative Scientific Visualization & Extensible 3D (X3D)

March 2005

David LAM, EDF-IFE

Collaborative Scientific Visualization Extensible 3D (X3D)

- Plan

- Scientific Visualization
 - *calculation codes*
 - *visualization*
 - *applications*
 - *tools*
 - *collaborative visualization*
 - *visualization at EDF*
- X3D / Xj3D
 - *X3D Standard*
 - *Xj3D application*
- Extending X3D for scientific visualization
 - *new format for calculation code*
 - **SciViz** component
 - *using SAI*

Scientific Visualization (SciViz)

Scientific Visualization

- **Calculation code :**
 - encoded **mathematical expressions** in order to **simulate the evolution** of a simplified representation of a system

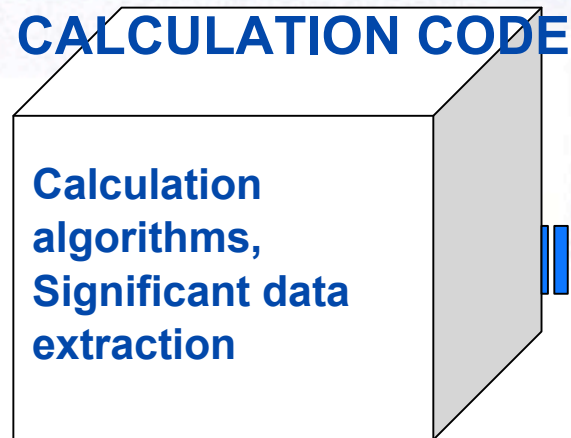

Scientific Visualization

- Calculation code

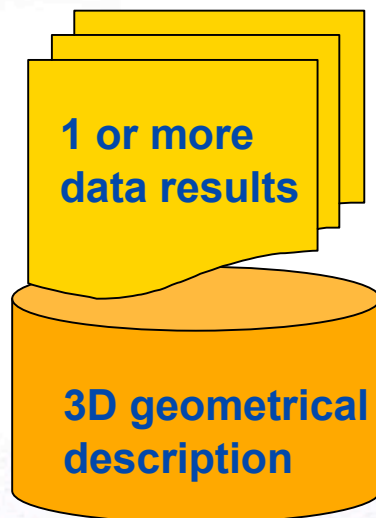

+

Initial conditions,
Limits conditions

Scientific Visualization

- **Scientific visualization** : process that converts raw numerical data to a visual representation of these data, as a support for understanding them

Scientific Visualization

- Applications

- Mechanics
- Fluid dynamics
- Radiation
- ...

Scientific Visualization

- User applications

- EnSight, Paraview, AVS, ...
- CoVise, OpenGL Vizserver, ...

EnSight
Visualize, Analyze, Communicate

 **AVS** *Advanced Visual Systems*

 **ParaView**
Parallel Visualization Application

OpenGL | **Vizserver**[™]
An SGI Technology

Scientific Visualization

- **Tools for easy data extraction**
 - Cutting planes, Iso-surfaces, ...
- **For building reports**
 - Notes, Snapshots, ...

Scientific Visualization : adding collaboration

- **New technologies = New ways of working**
 - Shorten the distances between experts
 - Resolve problems
 - Sharing the workload
- **Example of use**
 - Medical
 - Automobile / aeronautic engineering
 - Oil & Gas exploration

Scientific Visualization

- **At EDF**
 - **Needs**
 - *Theoretical researches (physical, numerical simulations)*
 - *Industrial studies, maintenance*
 - *Calculation codes co-development projects (EDF-CEA)*
 - **Tools**
 - *EnSight (CEI), 10 years of partnership with EDF*
 - **Equipment**
 - *PC with Windows / Unix / Linux, keyboard, 3-Buttons mouse*

Scientific Visualization : adding collaboration

- At EDF

- Research activities :
 - *Distant communication between experts, results consultation*
- Industrial studies :
 - *Data validation*
 - *Distant and interactive consultation of the results*
 - *Enhanced presentation to the customer*
- Co-development projects :
 - *Same as above*

Scientific Visualization : adding collaboration

- Functionalities needed :
 - same scene, own view, view of the others, highlight objects, put notes

Scientific Visualization

- **LASCO (LArge Scale COllaborative visualization) project :**
 - Leaders : Guillaume Thibault, Christophe Mouton
 - Contributors : 8 engineers (XML, perception, visualization algorithms, functional analysis, network, ...)
- **Objective :**
 - visual support for the scientific community :
 - *Multiplatform, MultiUser, Ergonomic, Interactive, Access from the web, Large data sets (10-100M points)*

Scientific Visualization

- **Guest scientist at Institutt for Energiteknikk in Halden (Norway):**
 - evaluation of the X3D standard for supporting collaborative scientific visualization
 - *X3D : ISO/IEC FDIS 19775, ISO/IEC FCD 19776-19777*
 - provide a feasibility prototype

X3D / Xj3D

Scientific visualization and X3D/Xj3D

- What is X3D ?

- Web3D consortium *open standard* for describing 3D content
- Successor of **VRML 2.0** or VRML97
 - *Enhancements : XML, well-specified, componentized, extensible, binary format*
 - *Open Source implementation : Xj3D*
- www.web3d.org

Xj3D - Overview

- Overview

- Web3D Consortium **open-source** project to create a toolkit for VRML97 and X3D content written completely in Java (www.xj3d.org)
- Official toolkit for validating the specification
- Developed by Yumetech, Inc

Yumetech, Inc.

- Features

- Multi-platform support (Windows, Linux, Mac)
- Multiple renderers: Java3D, OpenGL, Mobile

Xj3D - Overview

- Xj3D : architecture

***Extending X3D / Xj3D
for scientific visualization purposes***

Extending X3D – Xj3D

- File format for calculation codes : existing ones are numerous
- Need a file format for general purpose, that is easy to export data to : XML

Geometry

```
<sciviz>
  <vertices number="">
    <vertex id="" position=""/>
    ...
    <vertex id="" position=""/>
  </vertices>

  <meshes number="">
    <mesh id="" type="" vertices=""/>
    ...
    <mesh id="" type="" vertices=""/>
  </meshes>

  <part name="">
    <meshID=""/>
    ...
    <meshID=""/>
  </part>

  ...

  <part name="">
    <meshID=""/>
    ...
    <meshID=""/>
  </part>
</sciviz>
```

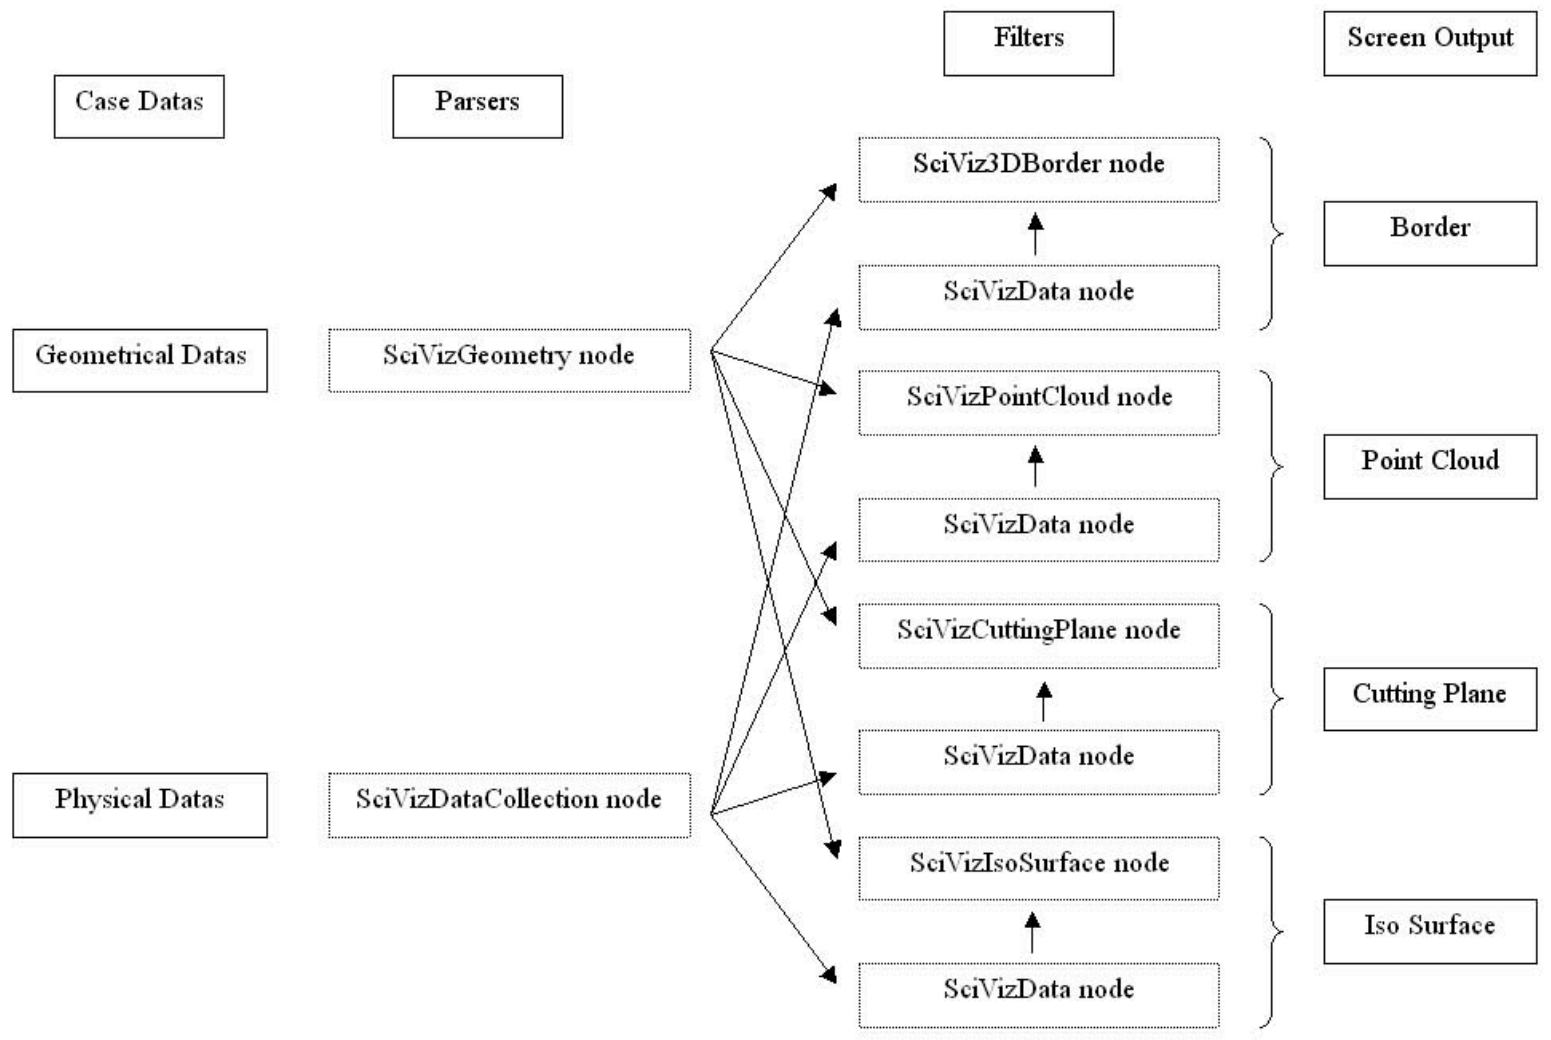

Data

```
<sciviz>
  <dataset name="Pressure" type="scalar">
    <timeStep id="1" >
      <data id="" value="" />
      ...
      <data id="" value="" />
    </timeStep>
  </dataset>

  <dataset name="Pressure" type="scalar">
    <timeStep id="2" >
      <data id="" value="" />
      ...
      <data id="" value="" />
    </timeStep>
  </dataset>
</sciviz>
```

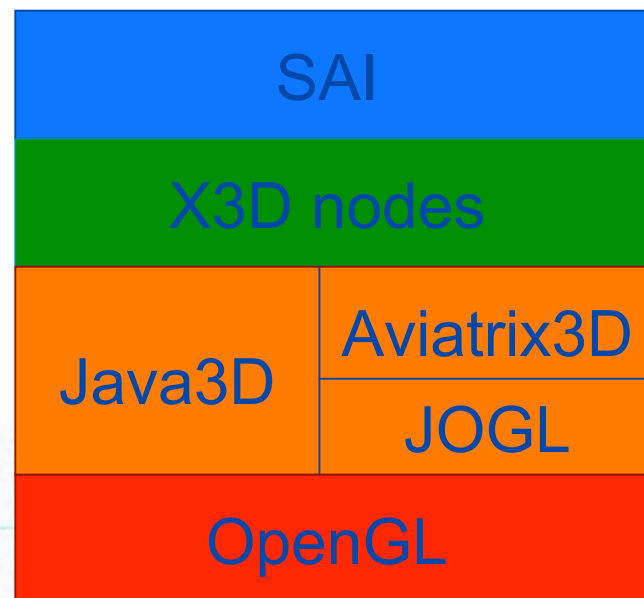

Extending X3D – Xj3D

- X3D base components : Geometry, Shape, Text, Time, Networking, Humanoid Animation, Geospatial ...
- New component, “SciViz”, containing the nodes :
 - Input data nodes:
 - *SciVizGeometry*
 - *SciVizDataCollection*
 - Filtering nodes:
 - *SciViz3DBorder*
 - *SciVizPointCloud*
 - *SciVizCuttingPlane*
 - *SciVizIsoSurface*
 - *SciVizData*

Extending X3D – Xj3D

- X3D : 3D content + how objects should interact with each other
- SAI, Scene Authoring Interface : how the user can interact with the 3D content

Extending X3D – Xj3D

- **SAI, Scene Authoring Interface**
 - defined in ISO/IEC 19775
 - allows :
 - *sending events*
 - *reading values*
 - *getting notified when events occur*
